SUMMARY

I am a computational neuroscience researcher studying statistical adaptation in biological neural networks. Through understanding how neural populations rapidly adapt to dynamically varying inputs, I seek to develop unsupervised online learning algorithms to enable more generalizable and data-efficient machine learning models. In addition to my theoretical work, I collaborate closely with experimental physiologists on projects involving statistical modeling of high-dimensional neural datasets.

Technical expertise: Python (PyTorch, NumPy, matplotlib); MATLAB; Git; LaTeX; numerical linear algebra; Bayesian statistics; signal processing; machine learning.

EDUCATION **Doctor of Philosophy**, Neural Science Present
New York University, New York, NY, USA
Thesis: Statistical adaptation and gain control in recurrent neural circuits
Advisors: Eero Simoncelli, David Heeger

Master of Science, Physiology and Pharmacology Jun 2018
Western University, London, ON, Canada
Thesis: A normalization circuit of attention in primate lateral prefrontal cortex
Advisor: Julio Martinez-Trujillo

Bachelor of Science, Joint Major in Physiology and Physics May 2014
McGill University, Montreal, QC, Canada
Dean's Multidisciplinary Undergraduate Research List
Thesis (Physiology): Spike count correlations among neuron types in prefrontal cortex
Advisor: Julio Martinez-Trujillo
Thesis (Physics): Effects of ionic buffer strength on polymer confinement in nanocavities
Advisor: Walter Reisner

WORK **Manager, Projects and Operations** Sep 2016 – Jun 2018
EXPERIENCE Ben Graham Centre for Value Investing, Ivey Business School, Western University
• Performed equity valuations and wrote quarterly reports for endowed investment fund
• Analyzed large retail banking datasets for academic study in behavioural finance

TEACHING **Graduate Teaching Assistant** Sep 2019 – Dec 2019
EXPERIENCE Mathematical Tools for Neural and Cognitive Science (NEURL-GA.2201)
Center for Neural Science, New York University

Graduate Teaching Assistant Sep 2015 – Apr 2016
Physiology Laboratory (Physiology 3130z)
Department of Physiology and Pharmacology, Western University
• Nominated for Graduate Student Teaching Award

SELECTED **plenoptic.py** May 2019 – Present
OPEN-SOURCE github.com/LabForComputationalVision/plenoptic
PROJECTS • A PyTorch library for analyzing and understanding learned model internal representations
• Developed code to assess a model's input sensitivity using randomized eigenvalue algorithms

Analyzing neural time series data Sep 2015 – Present
github.com/lyndond/Analyzing_Neural_Time_Series
• Implemented Python data analysis tools from textbook popular among neuroscience researchers
